

DEFINITION

The all weather portfolio is a technically defined investment approach designed to thrive in diverse economic conditions. It is a basket that contains commodities, stocks and bonds that can be purchased in their share price which aids in adequate diversification and returns from different sectors.

Mission

The portfolio comprises of 15% hard assets, 30% stocks and 55% bonds. It is particularly well suited for investors who prioritize steady growth while also aiming to preserve capital. This strategy can be implemented with a low cost, making it accessible to all investors. Additionally, it facilitates active management by fund managers.

Goals

Creating a passive income strategy capable of navigating all economic situations without relying on future condition predictions (under the rain or sun, you won't lose your capital and you will definitely earn profits). It consistently provides reliable returns with fewer losses than conventional options. It offers a solution for investors concerned about emotional decision-making and seeking capital preservation with reasonable growth.

WHY YOU SHOULD BUILD

Building an all-weather portfolio requires a prudent approach that encompasses various factors. It's crucial to allocate funds across diverse assets to create a portfolio capable of thriving in all economic conditions.
